

Second test day: the TRADES default ends \$2.00 above the real close

INTC 2015-01-30, 10:00-12:00. A single +\$0.94 second at minute 39 supplies 47% of that gap; the rest accrues as drift.

The default traverses 222 ticks against the real day's 33. Both corrected configurations stay within 45 ticks.
